

Hugh Baird College is a further education centre based in Liverpool, Merseyside (close to home).

They are one of the largest providers of education and training in Merseyside, delivering courses across an extensive range of provisions, from apprenticeships, to T-levels, A-levels, university level courses and adult learning.

They expect high results from their students and intend to support them as much as possible in terms of their journey onward into the world of employment.

In order to provide their students with the best possible educational opportunity and experience, Hugh Baird continually invest in state-of-the-art learning spaces. This is why they contacted us to design and construct an amazing immersive learning space

After several consultations with the college discussing budget, needs and wants, Hugh Baird decided that they wanted the **Full Immersive Installation**.

This kind of immersive room incorporates various sensory devices including: **aroma machines**, **full audio**, **wind machines**, a **360 camera**, as well as our award winning software with over 6000 scenarios.

The software and camera were particularly appealing to the college since they would have the option of **6000 scenarios** (from emergency A&E to a typical hairdressers), they would also have the option to record and publish their own virtual scenarios. Allowing for more flexibility and an enhanced control of the type of educational content students were immersed in.

The perfect purpose-built learning environment.
