

MYVIEWBOARD MANAGER

As an IT admin, you know how tough it is to manage the hundreds of devices and displays that live on your school network. Now with ViewSonic myViewBoard™ Manager, an easy-to-use web-based application, you can securely set up, manage and maintain all of your school's devices from a centralized dashboard.

Compatible with all viewsonic screens

- Features vary depending on the screen range

Cloud-Based Access

Remotely access and manage devices from anywhere, with no software installation needed. All you need is a web browser and a myViewBoard account.

Easy Device Enrollment

Enroll devices remotely with unique device PINs or serial numbers. Enroll devices on-site using QR code scanning. myViewBoard Manager also supports batch enrollment to expedite mass device setup.

Device Monitoring

Monitor the status of devices such as On/Off, Last Connected, Local IP Address and more, directly from the administration (admin) portal. Admins can also retrieve information such as serial numbers, asset tags, Wi-Fi SSID, etc. in real time.

Device Control

Remotely control devices from the admin portal, including turning the screen on and off, switching inputs, locking and unlocking firmware, and more.

Broadcasts

Instantly send standard or urgent messages to select devices from the admin console. A siren can also be enabled to provide visual and audible warnings for urgent messages. This feature is compatible with open API for third-party integration.

App Management

Remotely install or remove apps on enrolled devices. Admins can silently manage apps without the need for user intervention on the device. An app library provides a curated list of compatible apps (both ViewSonic and third party apps).

Urgent Alert Broadcast

With ViewSonic and third-party CAP messaging integrations, you can strengthen safety standards, increase visibility and keep your students and staff informed during critical events.

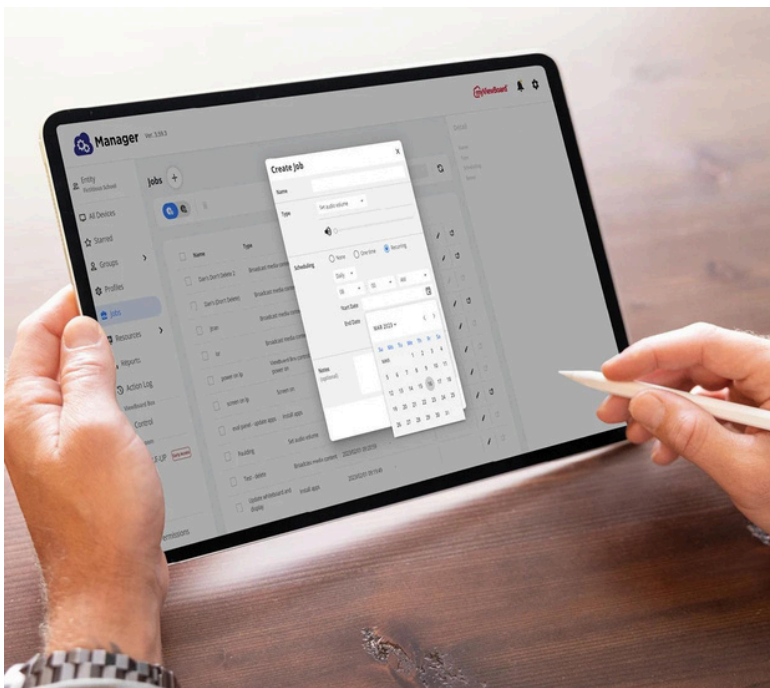

Multimedia Broadcast

Remotely broadcast pictures or videos to enrolled devices in full screen or use zones to display multiple pieces of media at once.

Task Scheduling

Streamline workflow by automating tasks ahead of time for increased efficiency in managing devices. Tasks can be planned for a specific time as a one-off event, or as a recurring event. Remotely schedule tasks such as screen on/off, power off, broadcast media and more on select devices.

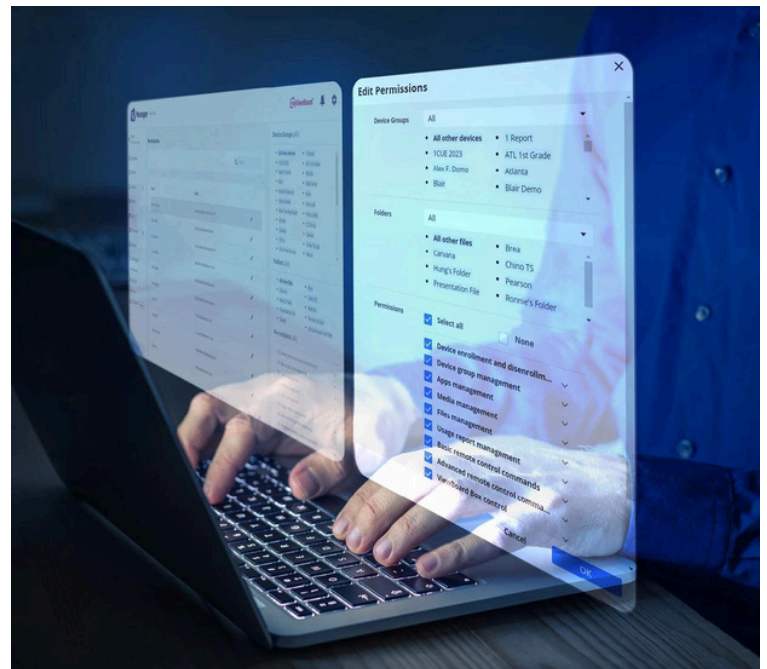

User Management

Maintain system security within myViewBoard Manager by managing user access to various features and devices. This allows you to easily maintain and control the different panel needs of various administrators and staff while keeping the system running smoothly.

System Backup and Restore

Create “restore points” to restore system files to an earlier point in time. Restore points can be automatically created based on a preset schedule. Retain peace of mind knowing that files and preferences are saved even in the event of unforeseen system errors or crashes.
