Nursery & Pre-School

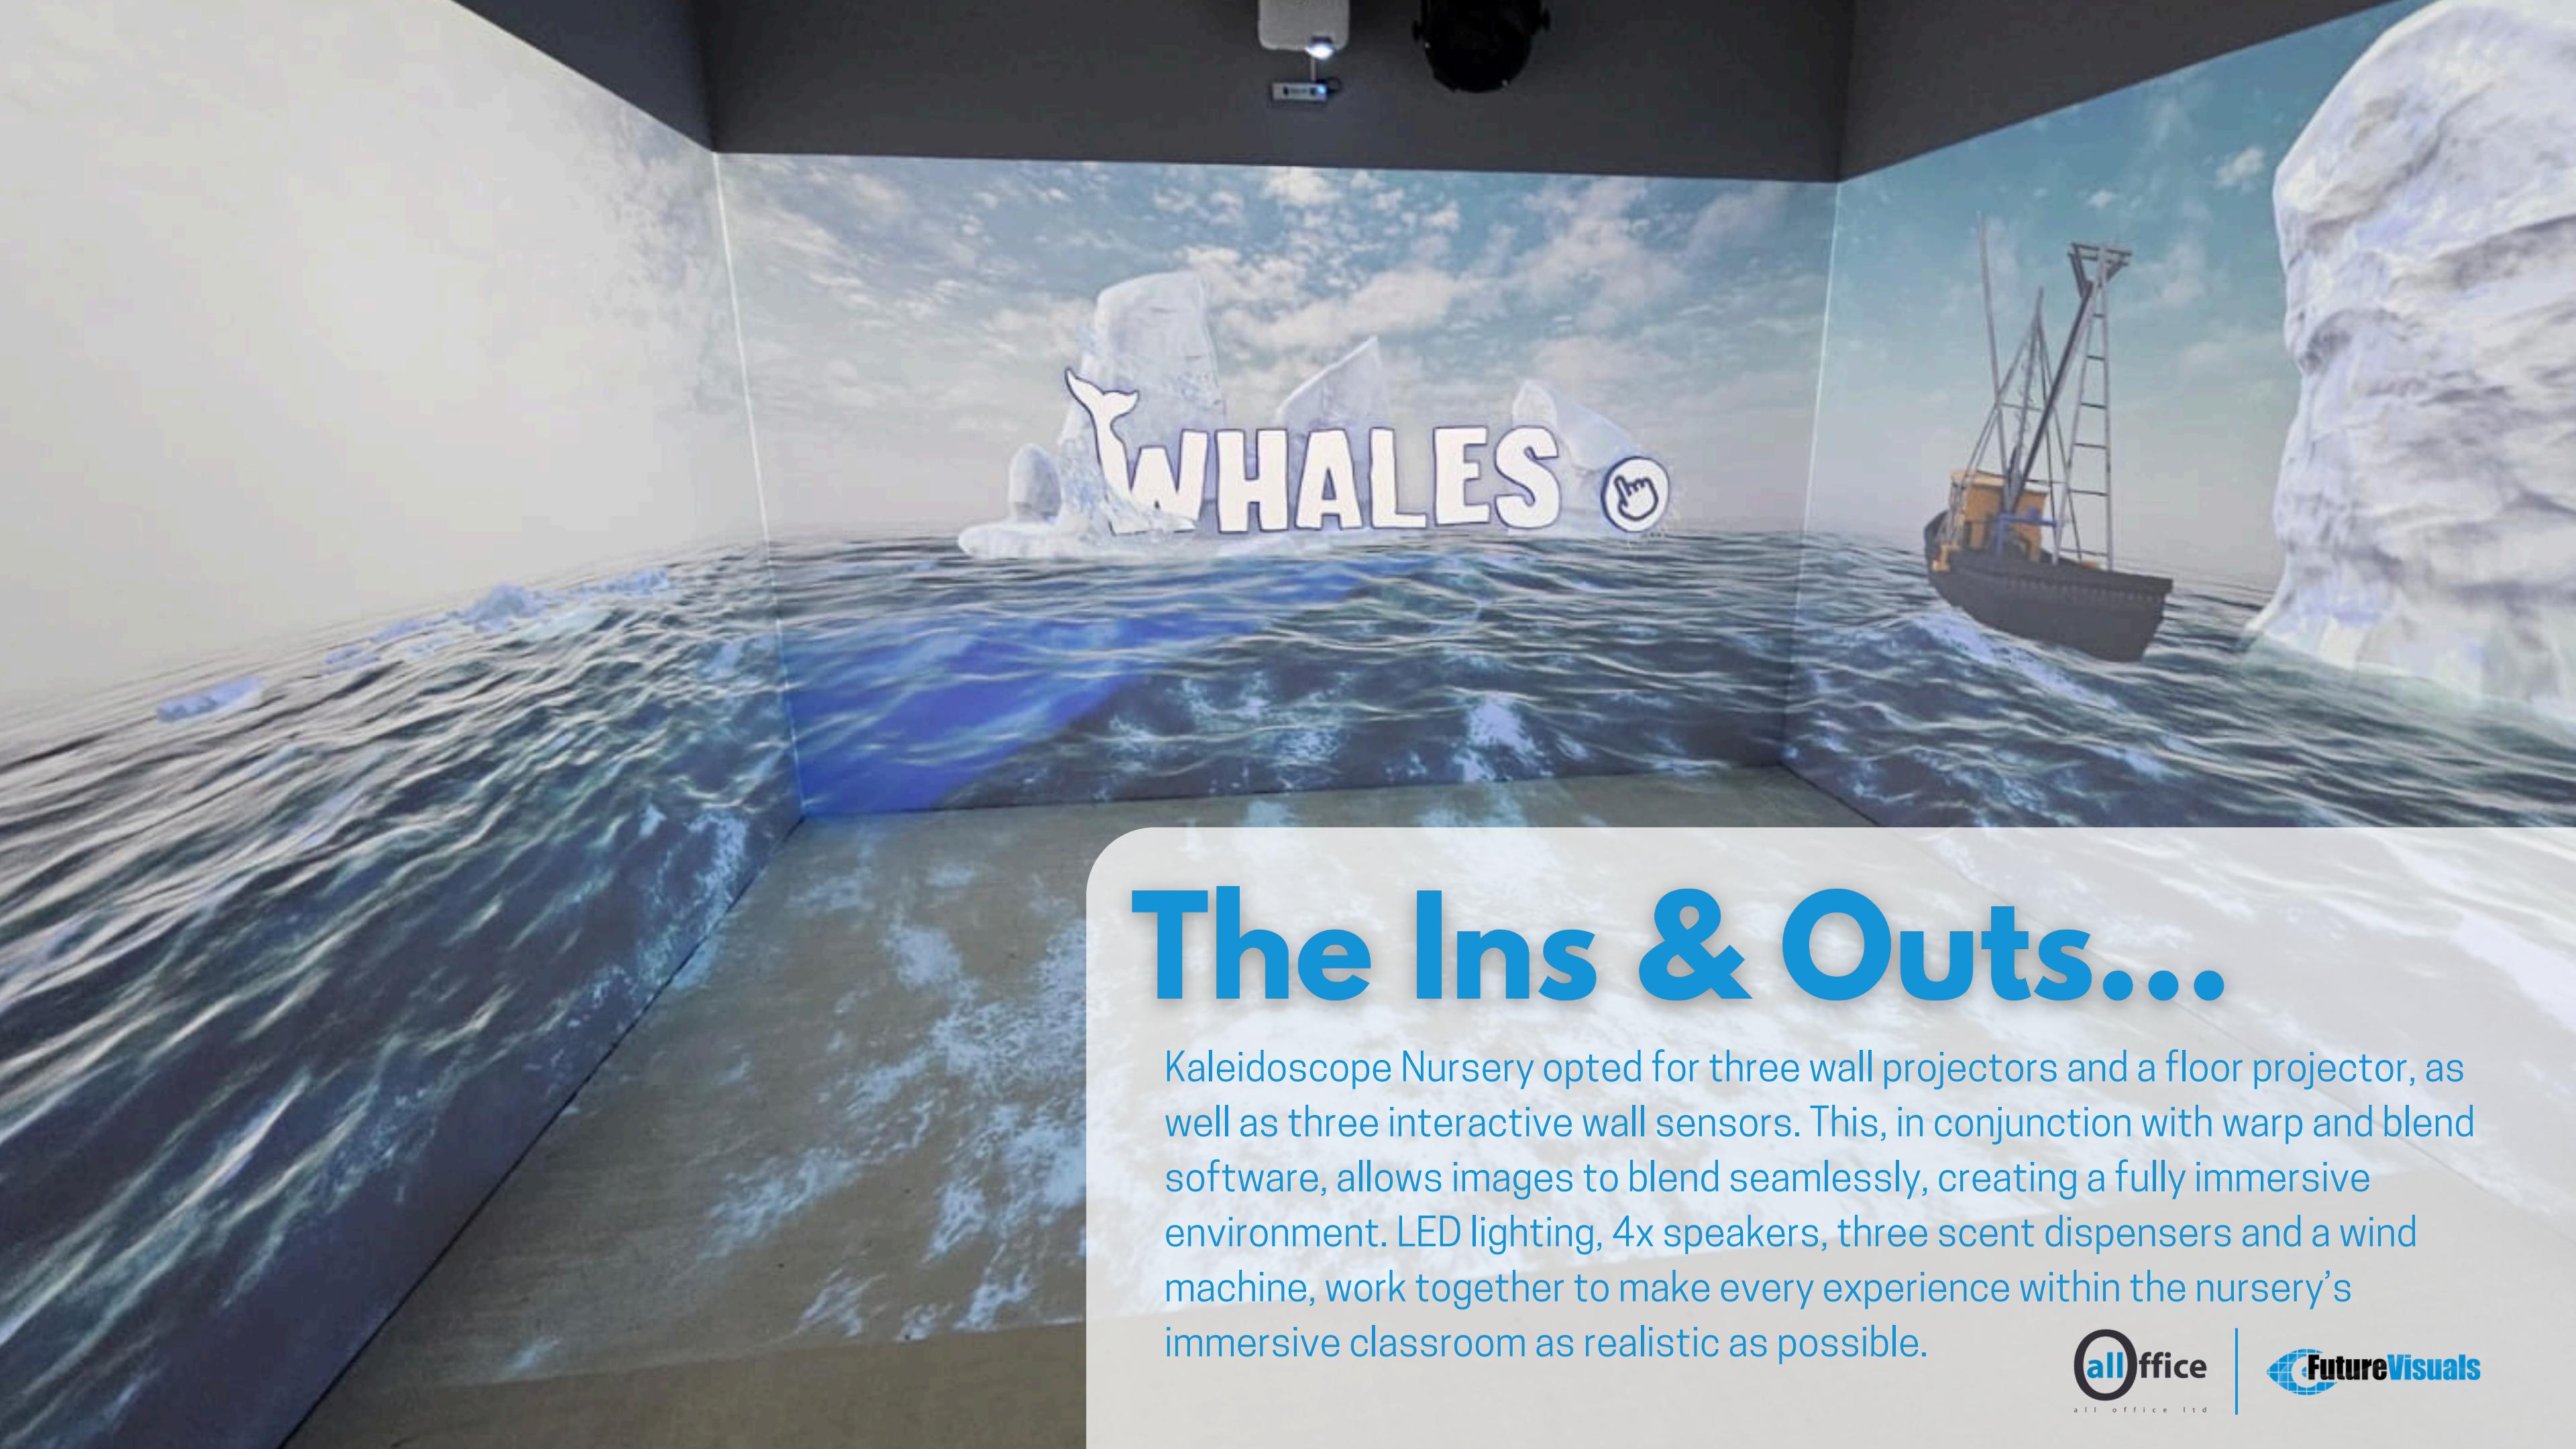

Immersive Room

# Kaleidoscope Nursery

Marking our first official nursery project, we installed an immersive classroom at Kaleidoscope Nursery in Sherborne. With an aim of providing the very best childcare from birth to 5-years, Kaleidoscope strive to nurture individuality, build confidence and help every student reach their full potential – even at such a young age.

Believing with each day comes new opportunities to learn, the nursery invested in this cutting-edge technology to offer their little ones something out of the ordinary – something no other nursery in the UK has – a fully interactive, 360-degree, multi-sensory simulated environment where even the impossible becomes possible. With over 6,000 immersive scenarios available, babies can explore sensory lightshows while older children can dive deep and learn about prehistoric dinosaurs, sea life and even space!

## The Ins & Outs...

Kaleidoscope Nursery opted for three wall projectors and a floor projector, as well as three interactive wall sensors. This, in conjunction with warp and blend software, allows images to blend seamlessly, creating a fully immersive environment. LED lighting, 4x speakers, three scent dispensers and a wind machine, work together to make every experience within the nursery's immersive classroom as realistic as possible.

# Content...

## Jack & The Beanstalk

Suitable for Early Years, students at Kaleidoscope Nursery can embark on a virtual adventure as they immerse themselves in the classic story of Jack & the Beanstalk.

## Shape Magic 2D Shapes

The Genie has lost some of his magic Jewls! With their students, Kaleidoscope can help the Genie find his jewls and test their knowledge of colours and 2D shapes as they go along, improving their mathematic capabilities!

## Under the Sea

Children can sit and unwind as they lose themselves in a relaxing underwater scene. As sea animals swim by, they can test their knowledge of underwater sea creatures and learn interesting facts about habitats and the underwater circle of life.

## Martian Worlds

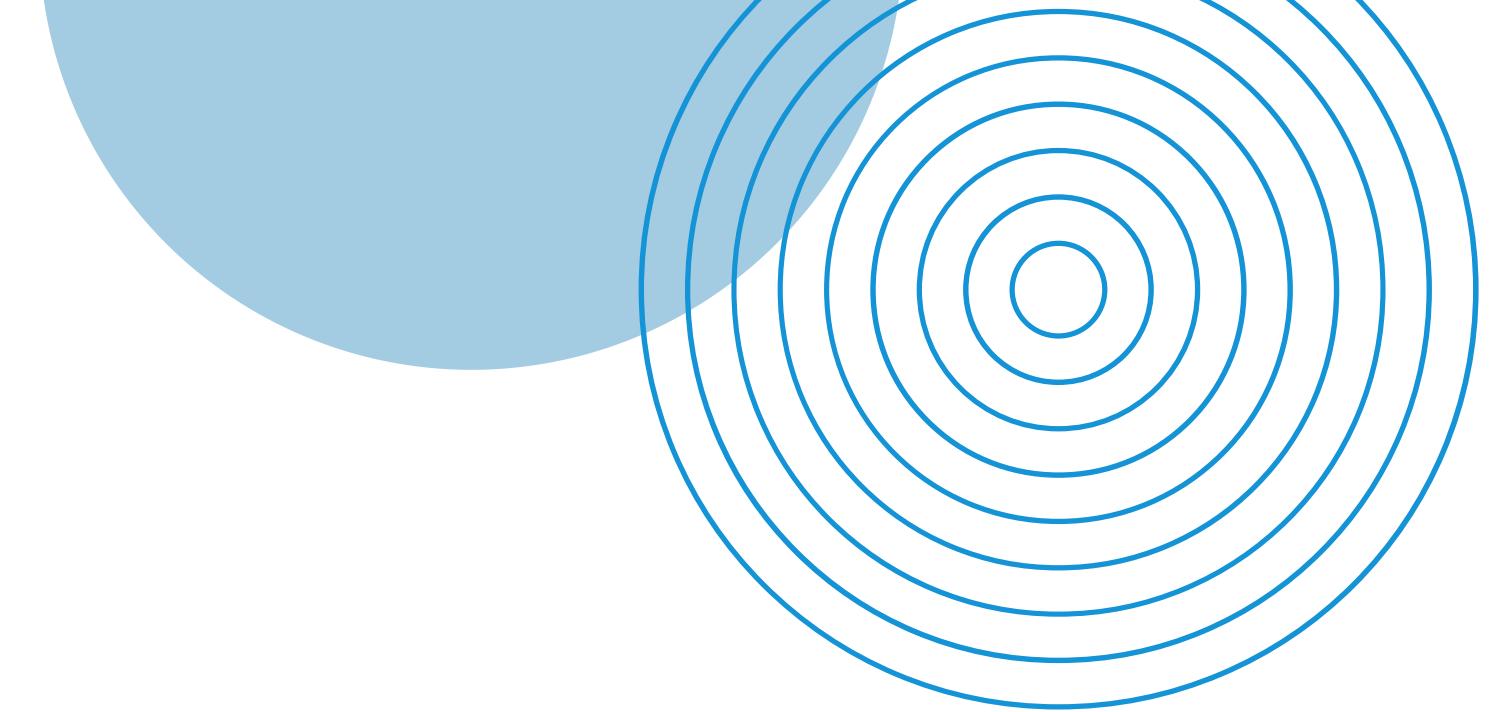

Children can help Martha and Melvin the Martians to prepare for their trip to earth by teaching them the difference between Earth and Mars. This experience is designed to help children with their phonics screening.

# Specialist On-Site Training

As part of our solution, we arranged specialist on-site training for Kaleidoscope Nursery. During these training sessions, staff were taught how to use their cutting-edge immersive classroom, how to utilise wind and aroma machines, and of course, how to create their own content within the immersive studio.

“

We are the first nursery in the area to install an immersive learning room, and we're really proud to be leading the way. It's a ground-breaking space which has brought stories to life for all our children here at Kaleidoscope Nursery. It has sparked curiosity, and turned everyday learning into an extraordinary adventure.
