

Lapbank Tab 60 Cabinet – Charge only 7761

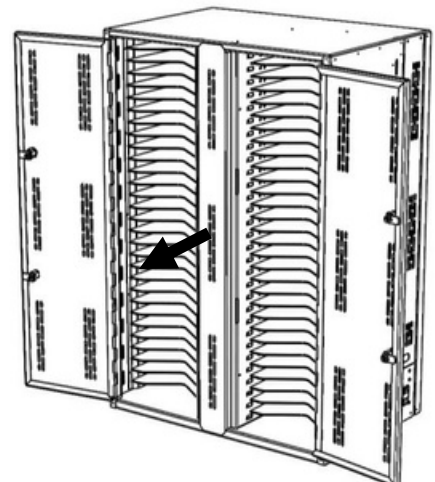

1. Unfasten the charge compartment covers from both sides by removing the M4 bolts indicated.

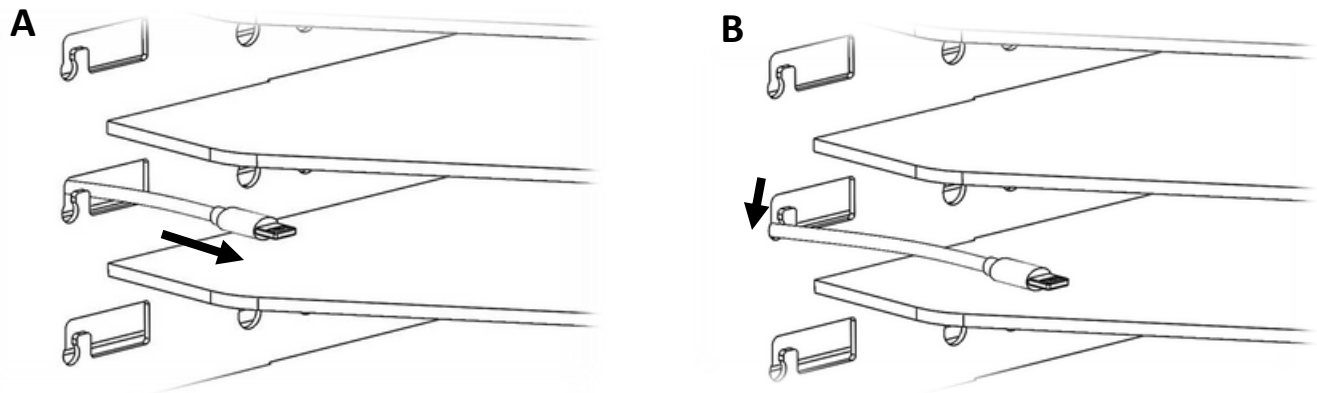

2. Remove both covers by pulling the covers up and outwards, using the cut out as a grip.

3. Now open the main doors of the cabinet and unscrew the four bolts holding the central front panel in place (two on each side). Then pull off the front cover of the cabinet.

4. Plug your device's chargers into the power strips, start from the centre and work from the lowest socket outwards. After installing each charger run the USB cable from the charger to the shelf, starting from the lowest shelf and working upwards. Pass the cable through the cut out as shown below (A). Secure the cable by pushing it into the end of the cut out (B). Be sure to leave enough cable to plug into your tablet, for extra security the cables and any spare cable can be cable tied in place using the headphone shaped cut outs.

5. After all the chargers and cables are installed locate the front cover on the two bolts and then secure in place using the bolts removed in step 3.
6. Hook the charge compartment covers back in place and secure in place using the fixings removed in step 1.
